

# Project Completion Report

**Project Title: Goat Raising Project**

**Beneficiaries: 10 farmers and below-the-poverty-line families**

**Implementing Organization: Blessed Redeemer Fellowship Inc.**

**Location: Dalumpinas, San Nicolas, Pangasinan**

**Project Cost: Php 100,000 / \$1,818**

# Project Summary:

The Goat Raising Project aimed to provide a sustainable source of income for the beneficiaries by providing them with high-quality goats and training on goat farming practices. This project was initiated to address the economic challenges faced by these families and to empower them through livestock rearing.

# Key Accomplishments:

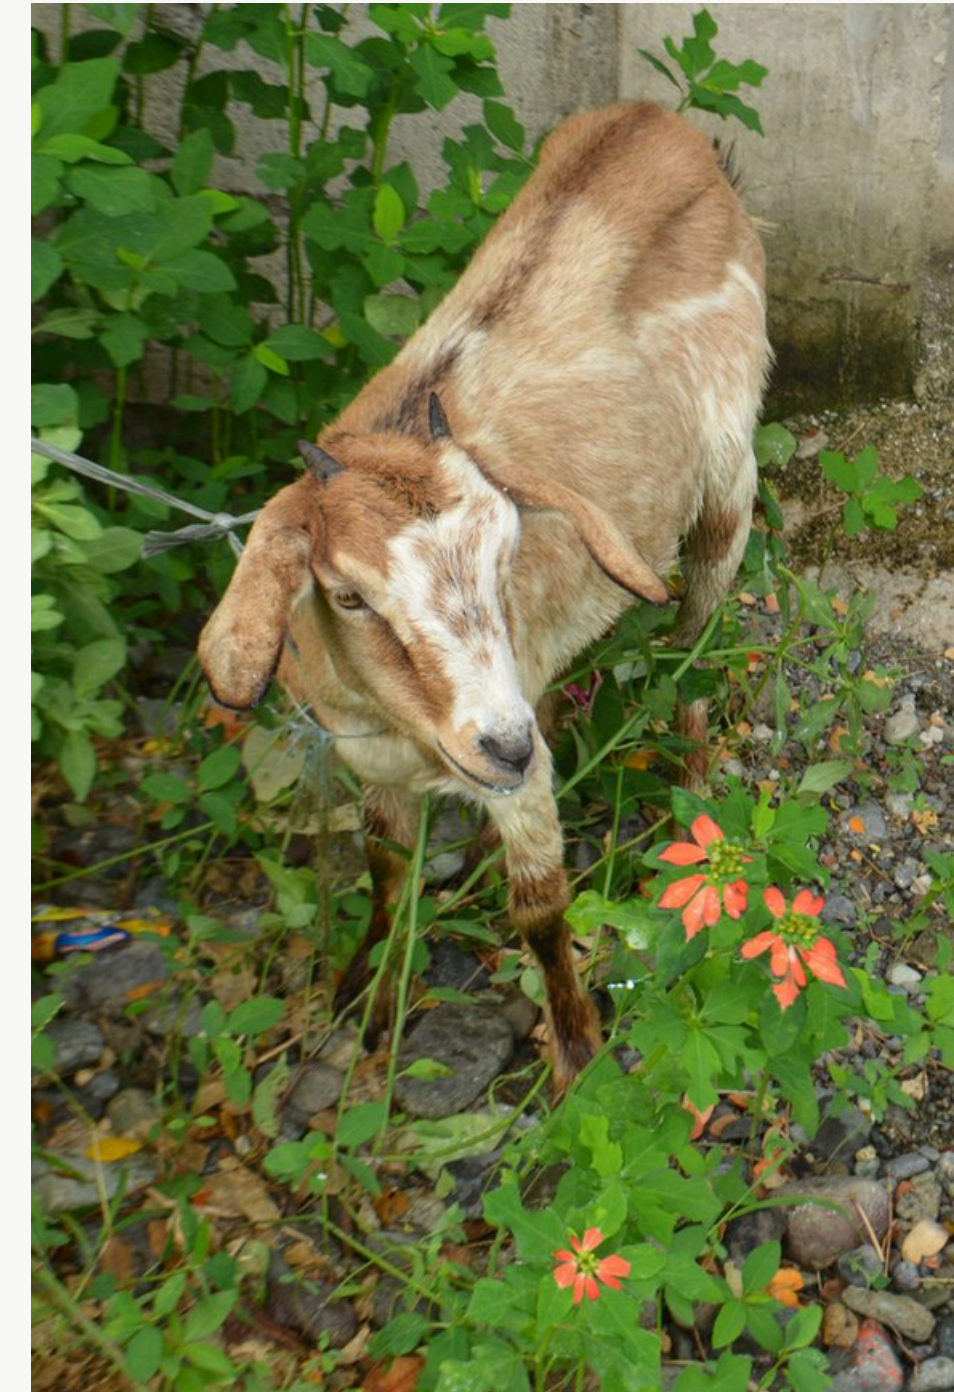

## Successful Distribution

20 healthy goats (10 male, 10 female) were carefully selected and integrated into the households of the 10 beneficiary families. The goats were chosen based on their breed, health, and reproductive potential, ensuring a strong foundation for the families' goat-rearing ventures.

# Improved Animal Health and Welfare

The project emphasized the importance of animal welfare and provided training on proper care and hygiene practices. This resulted in a significant improvement in the health and well-being of the goats.

# Community Awareness and Outreach

The project's success has sparked interest in goat rearing throughout the community. Through awareness campaigns and outreach activities, other families have become inspired to explore livestock rearing as a means of livelihood. This has led to a growing network of goat farmers in the area, creating a supportive and collaborative environment for all involved.

# Challenges and Solutions:

**Limited Initial Capital:** The initial project budget limited the number of goats that could be provided to each family. To overcome this, a "pass-on-the-gift" system was implemented, requiring beneficiaries to share offspring with other families in need. This approach not only ensures the project's sustainability but also fosters a sense of community responsibility and solidarity.

**Potential for Disease Outbreaks:** Goat rearing, like any livestock activity, carries the risk of disease outbreaks. To mitigate this risk, the project prioritized preventive measures, including vaccination protocols, hygiene practices, and early disease detection. Regular veterinary checkups were conducted to identify and address any health issues promptly.

# Overall Impact:

The Goat Raising Project has had a transformative impact on the lives of the beneficiaries and the community as a whole. By providing a sustainable source of income, improving food security, and fostering community cooperation, the project has significantly enhanced the economic and social well-being of the families involved.

# Future Recommendations:

- **Expansion of the Project:** Extend the project to reach more families in the community and neighboring areas.
- **Specialized Training:** Offer specialized training on value-added products from goat milk, such as cheese and yogurt, to further increase income potential.
- **Infrastructure Development:** Invest in infrastructure such as shelters, water troughs, and feeding equipment to enhance the living conditions of the goats and improve productivity.
- **Marketing Support:** Assist beneficiaries in marketing their goat products by connecting them with potential buyers, establishing partnerships with local businesses, and providing training on marketing strategies.

**Thank you, Pure  
Bayanihan!**
