

Project Completion Report

Project Title: Pisonet Project

Beneficiaries: 5 residents in Navotas City

Location: Navotas City

Implementing Organization: Amazing Faith In Jesus
Christian Church of Pastor Henry Arnaiz

Project Cost: Php 137,500 | \$2,500

Project Summary:

The Pisonet Project was designed to address poverty of the identified poorest residents in the community.

Recognizing the high cost of broadband connections, the project offers an affordable internet solution to residents, initially benefiting the first five recipients. By providing low-cost connectivity, the Pisonet Project aims to support both educational and livelihood needs in the area.

Key Accomplishments:

Successful Installation and Project Completion

All five recipients now have their machines fully operational.

The 5 recipients were carefully selected as they were identified to be the poorest residents in the community.

Two of the recipients have already started earning income on their first month, which has helped them with their basic needs.

Key Accomplishments:

Our Beachhead was able to save a portion from their earnings to cover the cost of the broadband connection for the fourth month and succeeding months.

He is actively training and assisting our recipients in strategies for business sustainability and continued operation.

Challenges and Solutions:

Electricity installation: due to the informal settlement status of some recipients, electricity connections were established by tapping into existing neighbor connections and installing sub-meters. This was necessary to power the required machine and modem.

Broadband installation: laying cables for the broadband connection presented challenges, especially for recipients living kilometers away from the nearest broadband post. The distance made broadband installation difficult for some recipients. Through diligent budgeting, we were able to accommodate the unexpected expense of cable installation within our project budget.

Overall Impact:

The Pisonet project offered a lifeline to these individuals facing unforeseen challenges. By providing a means to earn income, it has enabled them to address immediate needs such as food, medicine, and education, while also restoring their confidence and sense of self-worth.

Awarding Ceremony:

It took 2.5 months to plan and complete the project due to the challenges faced during installation. Despite the scorching heat or rainy weather, our Beachhead and his family stayed on schedule, determined to expedite the recipients' ability to start earning.

Future Recommendations

Provide trainings on:

Basic Business Management for effective decision-making and envision clear objectives and direction to measure progress and success.

Financial Literacy to make informed and effective financial decisions such as budgeting and planning, savings and to pass on good financial habits and knowledge to their children

Future Recommendations

Customer Service Skills and Personal Development to create positive interactions with customers so they are more likely to return, resulting in increased customer loyalty and repeat purchases.

Basic knowledge on Technology and Tools to save on cost and reduce downtime. It reduces the need for external repair services, saving on service calls and repair costs. With knowledge on basic trouble shooting, it resolve machine issues quickly minimizes downtime, ensuring continuous operations and productivity.
